Restoration Ecology Jul 05 2020 Enlarged, enhanced and internationalized edition of the first restoration ecology textbook to be published, with foreword by Dr. Steven Whisnant of Texas A&M University and Chair of the Society of Ecological Restoration. Since 2006, when the first edition of this book appeared, major advances have taken place in restoration science and in the practice of ecological restoration. Both are now accepted as key components of the increasingly urgent search for sustainability at global, national, and community levels - hence the phrase 'New Frontier' in the title. While the first edition focused on ecosystems and landscapes in Europe, this new edition covers biomes and contexts all over the world. Several new chapters deal with broad issues such as biological invasions, climate change, and agricultural land abandonment as they relate to restoration science and ecological restoration. Case studies are included from Australia, North America, and the tropics. This is an accessible textbook for senior undergraduate and graduate level students, and early career scientists. The book also provides a solid scientific background for managers, volunteers, and mid-career professionals involved in the practice of ecological restoration. Review of the first edition: "I suspect that this volume will find its way onto the shelves of many restoration researchers and practitioners and will be used as a key text in graduate courses, where it will help fill a large void. My own copy is already heavily bookmarked, and will be a constant source of research ideas and lecture material." Rethinking Zapotec Time Jun 03 2020 In 1702, after the brutal suppression of a Zapotec revolt, the bishop of Oaxaca proclaimed an amnesty for idolatry in exchange for collective confessions. To evade conflict, Northern Zapotec communities denounced ritual specialists and surrendered sacred songs and 102 divinatory manuals, which preserve cosmological accounts, exchanges with divine beings, and protocols of pre-Columbian origin that strongly resemble sections of the Codex Borgia. These texts were sent to Spain as evidence of failed Dominican evangelization efforts, and there they remained, in oblivion, until the 1960s. In this book, David Tavárez dives deep into this formidable archive of ritual and divinatory manuals, the largest calendar corpus in the colonial Americas, and emerges with a rich understanding of Indigenous social and cultural history, Mesoamerican theories of cosmos and time, and Zapotec ancestor worship. Drawing on his knowledge of Zapotec and Nahuatl, two decades of archival research, and a decade of fieldwork, Tavárez dissects Mesoamerican calendars as well as Native resistance and accommodation to the colonial conquest of time, while also addressing entangled transatlantic histories and shining new light on texts still connected to contemporary observances in Zapotec communities.

HEC River Analysis System (HEC-RAS) Sep 18 2021 The Hydrologic Engineering Center (HE) is developing next generation software for one-dimensional river hydraulics. The HEC-RAS River Analysis System is intended to be the successor to the current steady-flow HEC-2 Water Surface Profiles Program as well as provide unsteady flow, sediment transport, and hydraulic design capabilities in the future. A common data representation of a river network is used by all modeling methods, thus allowing the user to more easily migrate from steady-flow model with several significant advances over HEC-2. An overview of the Version 1 program package and some of the improved hydraulic features are presented.

Guide to Standard Floras of the World Feb 09 2021 This 2001 book provides a selective annotated bibliography of the principal floras and related works of inventory for vascular plants. The second edition was completely updated and expanded to take into account the substantial literature of the late twentieth century, and features a more fully developed review of the history of floristic documentation. The works covered are principally specialist publications such as floras, checklists, distribution atlases, systematic iconographies and enumerations or catalogues, although a relatively few more popularly oriented books are also included. The Guide is organised in ten geographical divisions, with these successively divided into regions and units, each of which is prefaced with a historical review of floristic studies. In addition to the bibliography, the book includes general chapters on botanical bibliography, the history of floras, and general principles and current trends, plus an appendix on bibliographic searching, a lexicon of serial abbreviations, and author and geographical indexes.

Crossing the River with Dogs Nov 01 2022 Crossing the River with Dogs: Problem Solving for College Students, 3rd Edition promotes the philosophy that students learn best by working in groups and the skills required for real workplace problem solving are those skills of collaboration. The text aims to improve students' writing, oral communication, and collaboration skills while teaching mathematical problem-solving

strategies. Focusing entirely on problem solving and using issues relevant to college students for examples, the authors continue their approach of explaining classic as well as non-traditional strategies through dialogs among fictitious students. This text is appropriate for a problem solving, quantitative reasoning, liberal arts mathematics, mathematics for elementary teachers, or developmental mathematics course.
