Applications of Supercomputers in Engineering II Oct 09 2020 This book comprises an edited version of the Proceedings of the 2nd International Conference on Applications of Supercomputers in Engineering which took place at the Massachusetts Institute of Technology, Cambridge, USA during August 1991. The Conference was organized by the Wessex Institute of Technology, Southampton, UK with the support of the International Society for Boundary Elements. The first International Conference on Applications of Supercomputers in Engineering held in Southampton, UK in September 1989 was a very successful meeting and the resulting Conference Proceedings are now widely distributed throughout the world. The revolutionary aspects of the next generation of computers are now fully recognised by many engineers and scientists. Vector and parallel computers form the basis of the computing power needed to address the complex problems with which engineers are faced. The new machines not only increase the size of the problems which can be solved, but also require a different computational approach to obtain the most efficient results.

Asian Defence Review 2012 May 28 2022 With the shift of global power from West to East, we have entered the era of an Asia-centred century. The rise of China and India, the recovery and resurgence of Russia on one side and Japan on the other, and the nature of the international order are leading to enormous changes. These transformational changes in the military, economic and political dynamics of Asia are accelerating with the passage of time. Historically, changes in the international order and equations of power among national have been almost inevitably accompanied by conflicts and wars. The challenge ahead of the international community in general and Asian countries in particular would be how to ensure that this is avoided, and competition, so necessary to shaping the future, is managed below the levels of armed conflict. This is crucial for most countries like India so that their comprehensive national development can progress without adverse developments. In order to work toward such goals, it is necessary to look at security and military-related issues as objectively as possible. This volume, a resource base for the professional and the general reader, is the sixth in the series of the annual publication of the Centre for Air Power Studies under this title, which aims to fill a critical information and knowledge gap in current strategic literature dealing with military strategy, defence politics and trends in military capabilities that impact countries in Asia. In particular, it covers some of the important areas that affect Asian countries, with a focus on China, India and Pakistan, to provide the requisite regional balance.
