Understanding Lifespan Development Oct 22 2021 Understanding Lifespan Development Lifespan Developmental Systems Mar 03 2020 Everything you always wanted to know about theories, meta-theories, methods, and interventions but didn't realize you needed to ask. This innovative textbook takes advanced undergraduate and graduate students "behind the curtain" of standard developmental science, so they can begin to appreciate the generative value and methodological challenges of a lifespan developmental systems perspective. It envisions applied developmental science as focused on ways to use knowledge about human development to help solve societal problems in real-life contexts, and considers applied developmental research to be purpose driven, field based, community engaged, and oriented toward efforts to optimize development. Based on the authors' more than 25 years of teaching, this text is designed to help researchers and their students intentionally create a cooperative learning community, full of arguments, doubts, and insights, that can facilitate their own internal paradigm shifts, one student at a time. With the aid of extensive online supplementary materials, students of developmental psychology as well as students in other psychological subdisciplines (such as industrial-organizational, social, and community psychology) and

applied professions that rely on developmental training (such as education, social work, counseling, nursing, health care, and business) will find this to be an invaluable guidebook and toolbox for conceptualizing and studying applied problems from a lifespan developmental systems perspective.

Lifespan Development and the Brain Aug 20 2021 The book focuses on the developmental analysis of the brain-culture-environment dynamic and argues that this dynamic is interactive and reciprocal. Brain and culture co-determine each other. As a whole, this book refutes any unidirectional conception of the brain-culture dynamic. Each is influenced by and modifies the other. To capture the ubiquitous reach and significance of the mutually dependent brain-culture system, the metaphor of biocultural co-constructivism is invoked. Distinguished researchers from cognitive neuroscience, cognitive psychology and developmental psychology review the evidence in their respective fields. A special focus of the book is its coverage of the entire human lifespan from infancy to old age.

Transforming the Workforce for Children Birth Through Age 8 Nov 30 2019 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. **Transforming the Workforce for Children Birth Through Age 8** explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. **Transforming the Workforce for Children Birth Through Age 8** offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

The Promise of Adolescence Sep 08 2020 Adolescence€"beginning with the onset of puberty

and ending in the mid-20s" is a critical period of development during which key areas of the brain mature and develop. These changes in brain structure, function, and connectivity mark adolescence as a period of opportunity to discover new vistas, to form relationships with peers and adults, and to explore one's developing identity. It is also a period of resilience that can ameliorate childhood setbacks and set the stage for a thriving trajectory over the life course. Because adolescents comprise nearly one-fourth of the entire U.S. population, the nation needs policies and practices that will better leverage these developmental opportunities to harness the promise of adolescence" rather than focusing myopically on containing its risks. This report examines the neurobiological and socio-behavioral science of adolescent development and outlines how this knowledge can be applied, both to promote adolescent well-being, resilience, and development, and to rectify structural barriers and inequalities in opportunity, enabling all adolescents to flourish.

The Ecology of Purposeful Living Across the Lifespan Jun 25 2019 This book explores what it means to live a purposeful life and outlines the benefits associated with purpose across different life domains. It also demonstrates that purpose in life is not reducible to constructs such as happiness, well-being, or identity development. The importance of having a sense of purpose in life is attracting renewed attention in both scientific and social arenas. Mounting evidence from intricately designed experiments and large-scale studies reveals how pursuing a purpose can make a person happier, healthier, and even lengthen their lifespan. However, existing texts on purpose have said little on why having has these effects, how it may influence our ability to navigate diverse environments, or how best to consider the construct from a multidisciplinary approach that moves beyond psychology. Recognizing this gap in the literature, this book provides multidisciplinary perspectives on the topic of purpose, and examines what we can do as researchers, interventionists, and society as a whole to imbue purposefulness in the lives of people across the lifespan. It includes contributions from key figures on topics such as identity, health, youth programs and youth purpose, diversity, aging and work.

Integrating Emotions and Cognition Throughout the Lifespan May 05 2020 This book synthesizes the literature on emotional development and cognition across the lifespan. The book proposes a core language by which to describe positive and problematic developmental changes by recourse to a parsimonious set of core principles, such as elevations or declines in tension thresholds and their relation to the waxing and waning of the cognitive system over the life course. It integrates, similarly, the lifelong consequences of the positive or damaging aspects of the social milieu in fostering increases in tension thresholds with their advanced capacity for maintaining equilibrium and warding off stress versus a lowering of tension thresholds with disturbances of equilibrium maintenance and heightened susceptibility to stress and deregulation.
