GB 3836.3-2010 English Translation of Chinese Standard May 16 2021 This part of GB 3836 specifies the requirements for the design, construction, testing and marking of electrical apparatus with type of protection increased safety "e" intended for use in explosive gas atmospheres. This standard applies to electrical apparatus where the rated voltage does not exceed 11 kV r.m.s. a.c. or d.c. Additional measures are applied to ensure that the apparatus does not produce arcs, sparks, or excessive temperatures in normal operation or under specified abnormal conditions. This

standard supplements and modifies the general requirements of GB 3836.1-2010. Where a requirement of this standard conflicts with a requirement of GB 3836.1-2010, the requirement of this standard takes precedence.

Stinger Missile Publications Combined: Manportable Air Defense (MANPAD) Technical And Doctrinal History From 1980 To 2018

Nov 29 2019 Over 2,800 total pages ... INTRODUCTION

Today's operational environment presents threats the Army has not faced in nearly 20 years. Against peer competitors, the joint force may face air parity or even localized enemy air overmatch, challenging the assumption of air superiority the joint force has held since the Korean War. This will make maneuver forces vulnerable to air attack by fixed- and rotary-wing aircraft, unmanned aircraft systems, and cruise missiles. Maneuver

forces lack capacity and capability to address these threats and the Army requires a speedy response. Stinger missiles provide a key capability for maneuver forces to defend themselves from aerial observation and attack. However, without direct involvement from senior brigade combat team leaders and effective leader training, these missiles will become dead weight at best or a fratricide in waiting at worst. Units must plan effectively to utilize this capability and ensure it ties directly to their scheme of maneuver as opposed to simply task-organizing one Stinger team per company. Just a SAMPLE of
