Peer Review and Manuscript Management in Scientific Journals

Sep 30 2022 This comprehensive yet concise book provides a thorough and complete guide

to every aspect of managing the peer review process for scientific journals. Until now, little information has been readily available on how this important facet of the journal publishing process should be conducted properly. *Peer Review and Manuscript Management in Scientific Journals* fills this gap and provides clear guidance on all aspects of peer review, from manuscript submission to final decision. *Peer Review and Manuscript Management in Scientific Journals* is an essential reference for science journal editors, editorial office staff and

publishers. It is an invaluable handbook for the set-up of new Editorial Offices, as well as a useful reference for well-established journals which may need guidance on a particular situation, or may want to review their current practices. Although intended primarily for journals in science, much of its content will be relevant to other scholarly areas. ?This wonderful work by Dr. Hames can be used as a textbook in courses for both experienced and novice editors, and I trust that it is what Dr. Hames intended when she prepared this beautiful book. Every scientific editor should read

it.? Journal of Educational Evaluation for Health Professionals, 2008 This book is co-published with the Association of Learned and Professional Society Publishers (ALPSP) (www.alpso.org) ALPSP members are entitled to a 30% discount on this book.

How To Survive Peer Review Jun 27 2022 How to Survive Peer Review is a practical handbook designed to help anybody who wants to get their work published in a scientific journal, wants to apply for research funds or who has to undergo formal appraisals at work. It will also help people who have been asked to

review articles, abstracts or grant applications. These activities are an essential part of scientific life, yet they virtually never get covered in professional training. It is often difficult even to get any helpful information about the processes from journals, meetings or funders. For the first time, this book brings together all you need to know, with authoritative advice from three authors who have researched peer review extensively and have considerable practical experience as researchers, editors and reviewers.

Peer Review Jun 15 2021 Peer review is the process by which submissions to journals and presses are evaluated with regard to suitability for publication. Armed with the results of numerous empirical studies, critics have leveled a variety of harsh charges against peer review such as: reviewers and editors are biased toward authors from prestigious institutions, peer review is biased toward established ideas, and it does a poor job of detecting errors and fraud. While an immense literature,

has sprouted on peer review in the sciences and social sciences, Peer Review is the first book-length, wide-ranging study of peer review that utilizes methods and resources of contemporary philosophy. Its six chapters cover the following topics: the tension between peer review and the liberal notion that truth emerges when ideas proliferate in the marketplace of ideas; arguments for and against blind review of submissions; the alleged conservatism of peer review; the anomalous nature of book reviewing; the status of non-peer-reviewed publications, such as invited articles or Internet

publications, in tenure and promotion cases; and the future of peer review in the age of the Internet. The author has also included several key readings about peer review.

Research Assessment in the Humanities Dec 10 2020 This book analyses and discusses the recent developments for assessing research quality in the humanities and related fields in the social sciences. Research assessments in the humanities are highly controversial and the evaluation

of humanities research is delicate. While citation-based research performance indicators are widely used in the natural and life sciences, quantitative measures for research performance meet strong opposition in the humanities. This volume combines the presentation of state-of-the-art projects on research assessments in the humanities by humanities scholars themselves with a description of the evaluation of humanities research in practice presented by research funders. Bibliometric issues concerning humanities

research complete the exhaustive analysis of humanities research assessment. The selection of authors is well-balanced between humanities scholars, research funders, and researchers on higher education. Hence, the edited volume succeeds in painting a comprehensive picture of research evaluation in the humanities. This book is valuable to university and science policy makers, university administrators, research evaluators, bibliometricians as well as humanities scholars who seek expert knowledge in research evaluation in the humanities.

Reading Peer Review Feb 21 2022 This Element describes for the first time the database of peer review reports at PLOS ONE, the largest scientific journal in the world, to which the authors had unique access. Specifically, this Element presents the background contexts and histories of peer review, the data-handling sensitivities of this type of research, the typical properties of reports in the journal to which the authors had access, a taxonomy of the reports, and their sentiment arcs. This unique work thereby yields a compelling and unprecedented set

of insights into the evolving state of peer review in the twenty-first century, at a crucial political moment for the transformation of science. It also, though, presents a study in radicalism and the ways in which PLOS's vision for science can be said to have effected change in the ultra-conservative contemporary university. This title is also available as Open Access on Cambridge Core.

ways of obtaining data and conducting experiments via the Internet. Although there are generic encyclopedias describing basic social science research methodologies in general, until now there has been no comprehensive A-to-Z reference work exploring methods specific to communication and media studies. Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies.

Entries cover every step of the research process, from the creative development of research topics and questions to literature reviews, selection of best methods (whether quantitative, qualitative, or mixed) for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues

students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities related to studying online multi-media environments. Email, texting, cellphone video, and blogging are shown not only as topics of research but also as means of collecting and analyzing data. Still other entries delve into considerations of accountability, copyright, confidentiality, data ownership and security, privacy, and other aspects of conducting an ethical research program. Features: 652 signed entries

are contained in an authoritative work spanning four volumes available in choice of electronic or print formats. Although organized A-to-Z, front matter includes a Reader's Guide grouping entries thematically to help students interested in a specific aspect of communication research to more easily locate directly related entries. Back matter includes a Chronology of the development of the field of communication research; a Resource Guide to classic books, journals, and associations; a Glossary introducing the terminology of the field; and a detailed

Index. Entries conclude with References/Further Readings and Cross-References to related entries to guide students further in their research journeys. The Index, Reader's Guide themes, and Cross-References combine to provide robust search-and-browse in the e-version.

The largest government funder is the National

Institutes of Health (NIH), followed by the Department of Defense (DoD). Almost half of DoD's medical research funding is administered by the Congressionally Directed Medical Research Programs (CDMRP). The mission of CDMRP is to foster innovative approaches to medical research in response to the needs of its stakeholdersâ€"the U.S. military, their families, the American public, and Congress. CDMRP funds medical research to be performed by other government and nongovernmental organizations, but it does not conduct research itself. The major focus of

CDMRP funded research is the improved prevention, diagnosis, and treatment of diseases, injuries, or conditions that affect service members and their families, and the general public. The hallmarks of CDMRP include reviewing applications for research funding using a two-tiered review process, and involving consumers throughout the process. Evaluation of the Congressionally Directed Medical Research Programs Review Process evaluates the CDMRP two-tiered peer review process, its coordination of research priorities

with NIH and the Department of Veterans Affairs, and provides recommendations on how the process for reviewing and selecting studies can be improved. Stories of Open:

Jul 17 2021 Peer review processes in scholarly publishing are often hidden behind layers of opacity, leaving authors--and even reviewers--with many questions about the process. Open peer review is one way to improve the practice. It can shorten the time between manuscript submission and publication, hold reviewers accountable for their work, make more apparent the hidden labor of reviewing and

editing, allow for collaborative discourse between authors and reviewers, and more. Even with these benefits, open peer review is not widely accepted or understood. Few academic librarians have experienced it, and each implementation can be different; anything open is highly nuanced and contextual.

Ultimately, when we discuss "open," we must discuss the stories around it. What is the aim? What are the pitfalls? What are the gains? And are we trying to simply replicate a broken system instead of reinventing it? **Stories of Open: Opening Peer Review through Narrative Inquiry**

examines the methods and processes of peer review, as well as the stories of those who have been through it. Eleven chapters are divided into three parts: * Part 1: Orientation. This section offers a conceptual frame for the book, providing details about narrative inquiry as a methodology and the author's worldview and research approach. * Part 2: The Stories (The Story Middle). What is the standard experience of peer review in our field? This section shares stories told from a variety of viewpoints and roles--author, editor, and referee--and explores how

these roles interact, the tension between them, and the duality and sometimes multiplicity of roles experienced by any one individual. * Part 3: Coda. These four chapters tie the stories to the idea of open and look in detail at the research method, as well as imagine how we might move forward--reflecting on our past stories to create future ones. When we open ourselves to others' experiences, we reflect on our own. Stories of Open offers questions for reflection at the end of many chapters in order to assist in the continued exploration of your own experiences with peer review,

and encourages the use of these reflections in creating new and improved peer review methods. Research Council (NRC), EPA Science Advisory Board, General Accounting Office, and many other organizations; in congressional oversight and judicial proceedings; and in countless criticisms and lawsuits from stakeholders with interests in particular EPA regulatory decisions. As a previous independent panel put it in the 1992 report Safeguarding the Future: Credible Science, Credible Decisions, EPA's policy and regulatory work receives a great deal of public attention, but the agency's scientific performance typically receives a similar degree of

attention only when the scientific basis for a decision is questioned. Thus, strong scientific performance is important not only to enable EPA to make informed and effective decisions, but also to gain credibility and public support for the environmental protection efforts of EPA and the nation. This report is the fourth and final one in a series prepared by two independent expert committees convened by the NRC in response to a request from Congress and to

subsequent, related requests from EPA. The Committee on Research Opportunities and Priorities for EPA- the companion committee in this study- was charged to provide an overview of significant emerging environmental issues, identify and prioritize research themes most relevant to understanding and resolving those issues, and consider the role of EPA's research program in the context of research being conducted or

supported by other organizations. That committee published an interim report in 1996 and a final report, Building a Foundation for Sound Environmental Decisions, in 1997. The Committee on Research and Peer Review in EPA was charged to evaluate research management and scientific peer-review practices in the agency. The committee published an interim report in 1995 and this final report.
