The Financial Professional's Guide to Communication Jun 25 2019 Today, financial clients are profoundly skeptical. They've been burned. Their consultants and advisors talk too much, use too much confusing technical jargon, work from too many boilerplate scripts, repeat too many generic caveats and useless disclaimers. Above all, clients say, their advisors don't listen well, and don't link their own needs and views to the recommendations they present. To succeed in today's radically new environment, financial advisors must first transform the way they communicate. In The Financial Professional's Guide to Communication, one of the world's leading experts on the financial client relationship shows them how to do precisely that. Drawing on his experience training elite financial professionals worldwide, Bob Finder shows how to actively listen, speak plainly with precision and passion, and engage clients with uncommon effectiveness. Finder demonstrates how to focus relentlessly on what matters most to each individual client, and then deliver intensely relevant recommendations with clarity and impact, in your own voice. You'll learn how to bring imagination, creativity, and even entertainment to your presentations and conversations, and use constructive criticism to keep improving with every new client meeting. Using these proven techniques, you can deliver truly extraordinary levels of professionalism and service, gain the powerful new competitive edge you're desperately searching for - and earn equally powerful rewards for yourself.

Violent Geographies Dec 12 2020 "Violent Geographies is essential to understanding how the politics of fear, terror, and violence in being largely hidden geographically can only be exposed in like manner. The 'War on Terror' finally receives the coolly critical analysis its ritual invocation has long required." —John Agnew, Professor of Geography, UCLA "Urgent, passionate and deeply humane, Violent Geographies is uncomfortable but utterly compelling reading. An essential guide to a world splintered and wounded by fear and aggression—this is geography at its most politically engaged, historically sensitive, and intellectually brave." —Ben Highmore, University of Sussex "This is what a 'public geography' should be all about: acute analysis of momentous issues of our time in an accessible language. Gregory and Pred have assembled a peerless group of critical geographers whose essays alter conventional understandings of terror, violence, and fear. No mere gazetteer, Violent Geographies shows how place, space and landscape are central components of the real and imagined practices that constitute organised violence past and present. If you thought terror, violence, and fear were the professional preserve of security analysts and foreign affairs experts this book will force you to think again." —Noel Castree, School of Environment and Development, Manchester University "A studied, passionate and moving examination of the way in which the violent logics of the 'War on Terror' have so quickly shuttered and reorganized the spaces of this planet on its different scales. From the book emerges a critical new cartography that clearly charts an archipelago of a large multiplicity of 'wild' and 'tamed' places as well as 'black holes' within and between which we all struggle to live." —Eyal Weizman, Director, Goldsmiths College Centre for Research Architecture

"We Dare Say Love" Jul 19 2021 "We Dare Say Love" takes up the critically important issue of what it means to educate Black male students in a large urban district. It chronicles the development and implementation of the African American Male Achievement Initiative in Oakland Unified School District, following a small group of Black male educators who changed district policy and practice to create a learning experience for Black boys rooted in love. The book takes readers inside the classrooms and inside the heads and hearts of program founders, leaders, and instructors to understand their pedagogy of care. It also elucidates the rituals, beliefs, and practices that created a classroom environment that held high expectations for the engagement and achievement of Black boys and provided a space for Black male students to blossom. "This book offers an anti-deficit, anti-essentialist perspective of Black males' performance in schools and gives nuance to the stark realities that young men face—some thriving, some struggling, some making progress, others seeking a place to be recognized for their full human potential." —From the Afterword by Tyrone C. Howard, professor of education, UCLA and author of Black Male(d): Peril and Promise in the Education of African American Males "Chapters capture the multiple dimensions of collaborations and partnerships required for such systemic change, one of which is a fundamental wrestling with the metanarratives in the United States and elsewhere around the Black body and in particular the Black male. We can all learn revealing lessons of struggle and victory from the chapters of this volume." —Carol D. Lee, Edwina S. Mathematics for Equity Mar 03 2020 In this book, nationally renowned scholars join classroom teachers to share equity-oriented approaches that have been successful with urban high school mathematics students. Compiling for the first time major research findings and practitioner experiences from Railside High School, the volume describes the evolution of a fundamentally different conception of learners and teaching. The chapters bring together research and reflection on teacher collaboration and professional community, student outcomes and mathematics classroom culture, reform curricula and pedagogy, and ongoing teacher development. Mathematics for Equity will be invaluable reading for teachers, schools, and districts interested in maintaining a focus on equity and improving student learning while making sense of the new demands of the Common Core State Standards. Book Features: Core principles of an equity-centered mathematics program. Examples of how to focus and organize the collaborative work of a math department to develop a shared pedagogy. Student experiences with an equity pedagogy that focuses on building perseverance, flexibility in thinking, and deep conceptual understanding. Connections between reconceptualizing learners and teaching, and achieving deep mathematics learning and equitable outcomes. Contributors include: Jo Boaler, Ilana Seidel Horn, Judith Warren Little, and Rachel Lotan. "Mathematics for Equity provides a kaleidoscopic view, in the voices of teachers, researchers, and students themselves, of one of the nation's most ambitious and successful attempts at teaching mathematics for equity. It shows what it takes to create a climate that supports students and teachers in engaging in meaningful mathematical activity—and, alas, how vulnerable such environments are to the wrong kinds of 'accountability.' Read it and learn." —Alan H. Schoenfeld, University of California at Berkeley "Want to fix what's wrong with mathematics instruction in your school? Read this book with your colleagues and do what it inspires you to do. Written by the brave teachers and former students who did it, as well as researchers." —Phil Daro, writing team, Common Core Standards, Strategic Education Research Partnership

Managing Complex Systems Aug 27 2019 Nine innovative methods to think outside the box and solve complex system problems Managing Complex Systems provides specific tools and guidance needed to be a more creative and innovative thinker. Following the author's methodology, the reader will be better able to devise and implement nontraditional solutions to seemingly intractable complex problems. By challenging the reader to think in new and creative ways, the book offers a road map to success, whether measured in terms of competitive advantage, greater market share, improved productivity, or higher profits, all based upon better solutions to difficult problems. The first four chapters set the foundation for creative thinking by exploring the nature of large-scale systems and complexity, thinking inside and outside the box, and examples of how an inventive mind solves problems in both management and scientific domains. Subsequent chapters address nine focused methods that the author has formulated to help the reader think outside the box: * Broaden and generalize * Crossover * Question conventional wisdom * Back of the envelope * Expanding the dimensions * Obversity * Remove constraints * Thinking with pictures * Systems approach Real-life examples are provided for each method that demonstrate how the approach enhances problem solving and decision making in system development and management. Following the discussion of the nine methods, the author examines group decision making as well as additional creative thinking procedures devised by other researchers, including references that assist in exploring these methods in greater detail. The author ends with a wrap-up chapter that includes a test to help readers practice their tendencies toward creative thinking skills and action with respect to solving real-world problems. The nine methods discussed in this book have broad applicability and can be used successfully by managers with a wide range of responsibilities in business and technology. For anyone who is tired of the same old approach with the same old results, this book is essential reading.
