[Science in an](#)

[Extreme](#)

[Environment](#) Feb

01 2020 On

February 20, 1963,

a team of nineteen

Americans

embarked on the

first expedition that

would combine

high-altitude

climbing with

scientific research.

The primary

objective of the six

scientists on the

team—who

procured funding by appealing to the military and political applications of their work—was to study how severe stress at high altitudes affected human behavior. The expedition would land the first American on the summit of Mount Everest nearly three years after a successful (though widely disputed) Chinese ascent. At the height of the Cold War, this struggle for the Himalaya turned Everest into both a contested political space and a remote, unpredictable laboratory. The US expedition promised to resurrect American heroism, embodied in a show of physical strength

and skill that, when combined with scientific expertise, would dominate international rivals on the frontiers of territorial exploration. It propelled mountaineers, scientists, and their test subjects 29,029 feet above sea level, the highest point of Chinese-occupied Tibet. There they faced hostile conditions that challenged and ultimately compromised standard research protocols, yielding results that were too exceptional to be generalized to other environments. With this book, Philip W. Clements offers a nuanced exploration of the impact of extremity on the production of scientific

knowledge and the role of masculinity and nationalism in scientific inquiry.

Mount Everest - Only the Sky

Above Jul 28 2019

ONLY THE SKY

ABOVE Mount

Everest, 29,028

feet—on May 27th, 1999, Helga

Hengge reaches the top of the world,

the highpoint of an exciting career

between the extremes of

creative work and outstanding

mountaineering

achievement. In her inspiring account

she takes her readers on an

adventure through Tibet and up to the summit of Mount

Everest with

emotional and

authentic insights

into the dynamics

of tackling the

ultimate challenge.

Accompanied by

spectacular images

of her two-month

long ascent via the

Northeast Ridge in

Tibet she shares

her story of pushing

physical and

emotional

boundaries in the

face of challenge.

She talks about the

step-by-step ascent,

the power of a

team, dealing with

setbacks, and about

trusting your inner

strength. The

highlight of her

account is the

ascent to the

summit and the

fulfillment of a

great dream. The

moment, when

there is only the sky above. Helga

Hengge, who has

dual citizenship,

was the first

German woman to

successfully summit

Everest and the

first American

woman to do so

from the North

side.

Exploring the

Legacy of the 1948

Arnhem Land

Expedition Dec 25

2021 "In 1948 a

collection of

scientists,

anthropologists and photographers journeyed to northern Australia for a seven-month tour of research and discovery - now regarded as 'the last of the big expeditions'. The American-Australian Scientific Expedition to Arnhem Land was front-page news at the time, but 60 years later it is virtually unknown. This lapse into obscurity was due partly to the fraught politics of Australian anthropology and animus towards its leader, the Adelaide-based writer-photographer Charles Mountford. Promoted as a 'friendly mission that would foster

good relations between Australia and its most powerful wartime ally, the Expedition was sponsored by National Geographic, the Smithsonian Institution and the Australian Government. An unlikely cocktail of science, diplomacy and popular geography, the Arnhem Land Expedition put the Aboriginal cultures of the vast Arnhem Land reserve on an international stage." -- Publisher's website. [FLIGHT, CAMERA, ACTION! The History of U.S. Naval Aviation Photography and Photo-Reconnaissance](#) Feb 12 2021 The first U.S. Navy aerial photographs

were taken in 1913 in support of fleet exercises off Guantanamo, Cuba. Following WWI, a Navy Photographic expedition went north, making the first aerial mapping photos of the Alaskan territory. WWII found Navy shuttermen in the Pacific theatre, performing pre- and post-attack reconnaissance, along with "hitting the beach" to record the war as it unfolded. Shortly after, Navy photographic units were in the Pacific to record early atomic bomb tests. The Navy's aerial photo reconnaissance mission, both at the front end with the weaponless aircrews and the output of thousands

of images and photo interpretation, continued to develop through the mid-20th century. The last aerial photo plane in the Navy's inventory was retired after flying to the Smithsonian's Air and Space Museum Annex at Dulles International Airport in Fairfax County, Virginia. The 74 year odyssey of Navy and Marine Corps aerial reconnaissance photography was finished.

Labyrinth of Ice Apr 04 2020
National Outdoor Book Awards Winner Winner of the BANFF Adventure Travel Award "A thrilling and harrowing story. If it's a cliché

to say I couldn't put this book down, well, too bad: I couldn't put this book down." —Jess Walter, bestselling author of Beautiful Ruins "Polar exploration is utter madness. It is the insistence of life where life shouldn't exist. And so, Labyrinth of Ice shows you exactly what happens when the unstoppable meets the unmovable. Buddy Levy outdoes himself here. The details and story are magnificent." —Brad Meltzer, bestselling author of The First Conspiracy: The Secret Plot to Kill George Washington Based on the author's exhaustive research, the incredible true story of the Greely

Expedition, one of the most harrowing adventures in the annals of polar exploration. In July 1881, Lt. A.W. Greely and his crew of 24 scientists and explorers were bound for the last region unmarked on global maps. Their goal: Farthest North. What would follow was one of the most extraordinary and terrible voyages ever made. Greely and his men confronted every possible challenge—vicious wolves, sub-zero temperatures, and months of total darkness—as they set about exploring one of the most remote, unrelenting environments on the planet. In May 1882, they broke the 300-year-old

record, and returned to camp to eagerly await the resupply ship scheduled to return at the end of the year. Only nothing came. 250 miles south, a wall of ice prevented any rescue from reaching them. Provisions thinned and a second winter descended. Back home, Greely's wife worked tirelessly against government resistance to rally a rescue mission. Months passed, and Greely made a drastic choice: he and his men loaded the remaining provisions and tools onto their five small boats, and pushed off into the treacherous waters. After just two weeks, dangerous floes surrounded them. Now new

dangers awaited: insanity, threats of mutiny, and cannibalism. As food dwindled and the men weakened, Greely's expedition clung desperately to life. Labyrinth of Ice tells the true story of the heroic lives and deaths of these voyagers hell-bent on fame and fortune—at any cost—and how their journey changed the world.

The Third Pole

Aug 28 2019

NPR Books We Love selection

"If you're only going to read one Everest book this decade, make it *The Third Pole*. . . . A riveting adventure."—*Outside Shivering,*

exhausted, gasping for oxygen, beyond doubt . . . A hundred-year mystery lured veteran climber Mark Synnott into an unlikely expedition up Mount Everest during the spring 2019 season that came to be known as "the Year Everest Broke." What he found was a gripping human story of impassioned characters from around the globe and a mountain that will consume your soul—and your life—if you let it. The mystery? On June 8, 1924, George Mallory and Sandy Irvine set out to stand on the roof of the world, where no one had stood before. They were last seen eight

hundred feet shy of Everest's summit still "going strong" for the top. Could they have succeeded decades before Sir Edmund Hillary and Tenzing Norgay? Irvine is believed to have carried a Kodak camera with him to record their attempt, but it, along with his body, had never been found. Did the frozen film in that camera have a photograph of Mallory and Irvine on the summit before they disappeared into the clouds, never to be seen again? Kodak says the film might still be viable. . . . Mark Synnott made his own ascent up the infamous North Face along with his friend Renan

Ozturk, a filmmaker using drones higher than any had previously flown. Readers witness first-hand how Synnott's quest led him from oxygen-deprivation training to archives and museums in England, to Kathmandu, the Tibetan high plateau, and up the North Face into a massive storm. The infamous traffic jams of climbers at the very summit immediately resulted in tragic deaths. Sherpas revolted. Chinese officials turned on Synnott's team. An Indian woman miraculously crawled her way to frostbitten survival. Synnott himself went off the safety rope—one slip and no one would have

been able to save him—committed to solving the mystery. Eleven climbers died on Everest that season, all of them mesmerized by an irresistible magic. The Third Pole is a rapidly accelerating ride to the limitless joy and horror of human obsession. **The New York Times Index** Aug 09 2020 **The Wireless Age** Sep 02 2022 Radio & TV News Nov 23 2021 Some issues, Aug. 1943-Apr. 1954, are called Radio-electronic engineering ed. (called in 1943 Radionics ed.) which include a separately paged section: Radio-electronic engineering (varies) v. 1, no. 2-v. 22, no. 7 (issued separately

Aug. 1954-May 1955).

Everest Jul 20 2021 Details the author and his partner Willi Unsoeld's ascent of Everest's West Ridge in 1963.

**The Expedition of
the Donner Party
and Its Tragic**

Fate Mar 28 2022

George and Tamsen
Donner and their
children, among the
very first to leave
from Illinois, joined
emigrants headed
to California in the

spring of 1846.

Beyond Fort
Bridger, Captain
Donner led a large
party through a
much-advertised
shortcut. Delays
and difficulties
caused them to be
snowbound in the
High Sierras, facing
the grim specter of
starvation and
extreme suffering.
Though only four
years old at the
time of the
expedition, the
captain's youngest
daughter, Eliza
Donner, would
never forget the
excitement of
crossing the
prairies—or the
horror of that
winter. Details
impressed on her
young mind were
later substantiated
by the recollections

of her older sisters
and other survivors.
Her book, originally
published in 1911,
is an intimate and
authoritative
account of the
Donner disaster.
George and Tamsen
Donner and those
who shared their
fate are fully
humanized in the
telling. Eliza also
relates what
happened to her
and a sister after
being rescued and
what it was like to
grow up in a world
that turned the
Donners into a
grisly legend.
